### **FOR OEMS**

- ✓ Are you an Original Equipment Manufacturer?
- ✓ Do you make optical systems requiring short arc lamp power supplies?
- ✓ Do you insist on the best quality, dependable, state-of-the-art products?

***If you answered YES to these questions, an EMSC product will suit your needs!***

### **WHY DO OEMS USE OUR PRODUCTS?**

#### **RELIABILITY**

Our number one concern. We know that OEMs cannot survive with products that fail in the field!

#### **TECHNOLOGY**

Our proven leadership in spectroscopy technology means that OEMs get the best products.

#### **QUALITY**

With every single product being tested, burnt-in and retested before getting the seal of approval to ship, OEMs are guaranteed a quality product.

#### **CONSERVATIVE SPECIFICATIONS**

Based on conservative measurements of parameters over a number of products, our specifications are always conservative. OEMs depend on our product to do what it is supposed to.

#### **CUSTOMIZATION**

With our design flexibility policy, some OEMs opt for a modified version of our products. OEMs get exactly what they want without incurring exorbitant engineering fees.

#### **TECH SUPPORT**

OEMs always have direct access to and technical support from our experienced design engineers.

### **EMSC's OEM STATEMENT**

*"We value our OEM customers. We work closely with them, customizing our product to their exact specifications, if necessary. We are committed to ensuring that our OEMs can complete their projects on-time. Our OEMs know the support they need in the field is a phone call away - to the same engineers who designed the products.*

*OEMs are able to gain time-to-market and save development dollars. Our OEM friendly policy is why we have so many satisfied OEM customers around the world."*

Andrew Krzywosz, President
